ABOUT ME

Data Science undergraduate with hands-on experience building end-to-end analytics solutions, fraud detection systems, and financial data analysis pipelines. Proficient in Python, SQL, and Power BI, with a strong foundation in statistical modelling and predictive machine learning — focused on transforming complex datasets into actionable business insights.

CERTIFICATES

Mathematics: Basics to Advanced for Data Science and GenAI	<i>Udemy – Krish Naik</i>
Complete 2026 Python Bootcamp: Learn Python from Scratch	<i>Udemy – Haris Ali Khan</i>
Complete Data Science Course	<i>Code with Harry</i>

EDUCATION

B.Sc. in Data Science Techno India University · GPA: 8.6 / 10	<i>2024 – Present</i>
Intermediate / Class XII (CBSE) Sudhir Memorial Institute · Score: 70%	<i>2023 – 2024</i>
Matriculation / Class X (CBSE) Sudhir Memorial Institute · Score: 91.2%	<i>2021 – 2022</i>

SKILLS

Programming & DB	Python, SQL, SQLite
Analysis & Viz	Pandas, NumPy, Matplotlib, Seaborn, Power BI, Advanced Excel
Machine Learning	Scikit-learn, CatBoost, SHAP, Feature Engineering, Model Evaluation
Statistics	Hypothesis Testing, EDA, Time Series Analysis, Bootstrap CIs
Excel	Pivot Tables, Power Query, XLOOKUP, VLOOKUP

PROJECTS / OPEN-SOURCE

FraudSense — Explainable Fraud Detection	<i>Machine Learning · Power BI</i>
- Built a CatBoost-based fraud detection model achieving 88.3% Precision, 90.4% Recall, and 89.4% F1-score via threshold optimisation using Precision-Recall-F1 trade-off analysis. - Applied SHAP explainability to surface key fraud drivers and feature importance rankings for stakeholder interpretation. - Designed a multi-page interactive Power BI dashboard: Executive Summary, Model Performance, SHAP Explainability, and Transaction Explorer.	

Vendor Performance Analysis	<i>SQL · Python · Power BI</i>
- Built a full analytics pipeline using SQL, SQLite, Python, and Power BI to evaluate vendor and brand profitability end-to-end. - Conducted EDA, outlier detection, correlation analysis, and hypothesis testing to identify key profitability drivers. - Developed KPI dashboards tracking sales, purchase contributions, and inventory turnover with actionable pricing recommendations.	

Indian Stock Market Analytics & EDA

Python · Statistics

- Analysed 5 years of NSE and BSE OHLCV data using Python, covering volatility, drawdown, seasonality, and clustering.
- Applied ANOVA, Kruskal-Wallis testing, and bootstrap confidence intervals to validate market seasonality effects.
- Identified momentum trends, diversification limitations, and top-performing equities across the Indian market.
